APAR PAUDEL

Pokhara, Nepal | +977-9847663355 | paudelapar2061@gmail.com

linkedin.com/in/apar-paudel22 | github.com/aparpaudel22 | apar-paudel.com.np

Final-year Computer Engineering undergraduate with hands-on experience in frontend web development and applied machine learning. Skilled in building end-to-end products from e-commerce platforms and news portals to ML-driven healthcare diagnostics and NLP-based sentiment intelligence tools.

EXPERIENCE

Frontend Developer Intern — *Dharan, Nepal*
CodeIT Nepal — *3-month Remote Internship*

- Worked on frontend development of web applications, contributing to UI implementation and component development
- Completed a dedicated course on React with Next.js, applying it to real project tasks during the internship

EDUCATION

Bachelor in Computer Engineering (Undergraduate) — *Pokhara*
Gandaki College of Engineering and Science — *2022 – Present*

+2 (Higher Secondary Education) — *Pokhara*
Motherland Secondary School — *2020 – 2022*

SEE — *Kushma*
Eyeball Academy — *2019*

PROJECTS

SentiTrack — Sentiment Analysis Web Application

- Built a web app that takes a single comment or a social media post link and classifies fetched comments as positive, negative, or neutral to support business and tourism intelligence
- Automated comment collection using the YouTube Data API v3 and Apify, then cleaned and normalized text with Python, Pandas, NLTK, and unicodedata
- Fine-tuned XLM-R / MuRIL transformer models with Hugging Face Transformers and PyTorch using a custom training loop, with Llama 8B used for monolingual conversion
- Tracked live training metrics with Trackio (Hugging Face Spaces) and evaluated results with scikit-learn and Hugging Face Evaluate (macro F1 score, classification reports)

Tools: Python, Pandas, NLTK, Hugging Face Transformers, PyTorch, Trackio, Google Colab, Scikit-learn

Heart Sound Analysis — ML-based Heart Disease Detection

- Developed a heart sound analysis system using machine learning and audio feature extraction to detect cardiovascular disease, aimed at improving diagnostic accessibility in underserved and remote regions
- Designed robust feature extraction methods and implemented machine learning / deep learning classification models, evaluating performance on the Yaseen dataset
- Built with a Python backend, MySQL database, and an HTML/CSS/JavaScript frontend for the interface

Tools: Python, HTML, CSS, JavaScript, MySQL, VS Code

GlowHive — E-commerce Cosmetics Web Application

- Built a full-stack e-commerce platform for browsing and purchasing cosmetics products

Panchase Online — News Portal with Live Radio

- Developed a news portal web application featuring a live radio streaming feature, inspired by Panchase FM 102.8MHz

BlockCatcher Game

- Built a lightweight browser game that visitors can play while the main website is under construction or maintenance

SKILLS

HTML, CSS, JavaScript, React, Next.js, Python, MySQL, Machine Learning, NLP, Git / GitHub, VS Code, Communication, Teamwork

INTERESTS

Singing and playing musical instruments | Radio jockeying — previously worked with Panchase F.M. 102.8MHz

LANGUAGE

Nepali, English, Hindi
